

MAE140 - Linear Circuits - Fall 13
Quick quiz on complex numbers

Instructions

- (i) Recall that $a + bj = \sqrt{a^2 + b^2} e^{j \arctan(b/a)}$
- (ii) $|a + bj| = \sqrt{a^2 + b^2}$ is the magnitude
- (iii) $\angle(a + bj) = \arctan(b/a)$ is the phase
- (iv) Recall Euler's formula is $e^{j\theta} = \cos \theta + j \sin \theta$

1. Compute the magnitude and phase of the complex numbers $1 + j$ and $1 - j$

2. Using your answer to Question 1, compute the magnitude and phase of

$$\frac{1 + j}{1 - j}$$

3. Match the numbers in the first column with the numbers in the second one

j	$e^{-j\pi}$
-1	$e^{j\frac{\pi}{6}}$
$\frac{\sqrt{3}}{2} + \frac{j}{2}$	$e^{j\frac{\pi}{2}}$
